

# Qwyit – True Cryptography Innovation

- ▶ The global Hardware Security Modules (HSM) market was \$581.05 million (2017); projected \$15.20 billion by 2025
- ▶ This entire H/W market is using the same ineffective security methods that have failed for 50 years in software: too big, too complex, too slow, too insecure
- ▶ Qwyit™ delivers security perfection with the required, real-world properties: Fast, Small, Efficient, Simple, Flexible, *Provably Secure*
- ▶ Qwyit needs \$750K to produce QwyitChip™, the world's fastest FPGA encryption chip that will replace all HSM external, separate, ineffective, costly new H/W
- ▶ With the proper partnerships and licensing models, Qwyit™ will dominate the HSM. Any investment will be lucrative
